

March 8, 2008

Dear Sir,

Graham Corp. has been using Powermaster tools for about 8 years and has been very pleased with the tool performance. We use these tools on a variety of different tube materials. Generally they are used on copper alloys including admiralty brass, 90/10 and 70/30 copper nickel and 316 and 304 stainless steel. We also have successfully used them on more difficult alloys such as 2205 duplex stainless steel tubes.

Rodney B. Bobo
